

ABSTRACT OF THE DISCLOSURE

By providing a mixture of surfactants and water, with the water content ranging between about 40% and 95% by weight based upon the weight of the entire composition, a unique, improved, liquid based foaming soap formulation is realized which is useable for a wide variety of applications, including wet shaving and dry shaving. In the preferred embodiment, the improved liquid based foaming soap formulations incorporate one or more therapeutic active in sufficient quantities to assure its efficacy. As a result, the formulation is useable for a wide variety of medical applications for preventing, treating, or reducing the spread or transmission of bacteria, virus, infections, and the like.
